1. OVERVIEW

The AP948 integrated circuit (IC) is a low-power CMOS 8-bit microcontroller (MCU) for USB audio application with universal serial bus (USB) peripheral interface designed specifically for applications that require isochronous data streaming. Applications include iPod digital docking and PC USB audio.

2. APPLICATIONS

2.1. Target Applications

- Docking system
- Clock radio
- USB audio application
- Bluetooth application

2.2. Application Features

2.2.1 USB Audio Feature

- Playback audio file from iPhone/iPod/iPad through USB interface

2.2.2 Docking Control Features

- Docking control through front panel buttons or remote controller
- Device charging through docking system
- Support Apple Authentication Coprocessor

2.2.3 Clock and Alarm Features

- 12/24 hour clock display mode selectable by user
- Dual alarm clocks
- User selectable alarm mode – wake-to-buzzer, wake-to-radio or wake-to-docked device
- Fixed snooze feature
- Programmable sleep timer

2.2.4 Radio Features

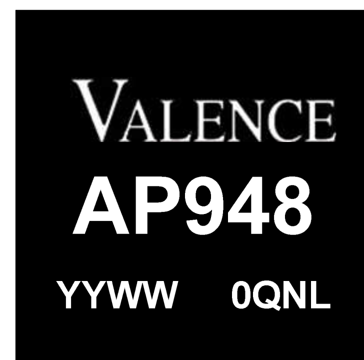
- Auto/Manual radio station scanning
- Programmable radio station memory (independent memory slots for FM and AM)

2.2.5 Other System Features

- Low standby current
- Firmware upgrade

3. ORDERING INFORMATION

ORDERING NUMBER	PINS	PACKAGE
AP948-QN-L	48	QFN



4. PIN CONFIGURATION

5. BLOCK DIAGRAM

The following diagram shows the system blocks embedded in AP948.

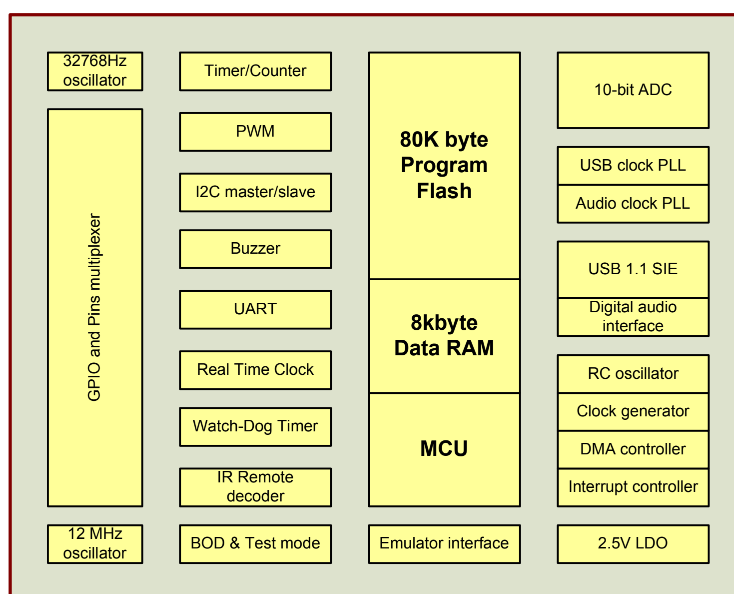

Figure 2 Internal Block Diagram of AP948

6. BUILT-IN PERIPHERALS

- 8-bit high performance, low power MCU
  - Operate at 32.768kHz up to 16MHz
  - Powerful instruction set : most single-cycle execution
  - 32 general purpose registers
  - Run, Stop and Power-down mode of operation
  - C or assembly programming
  - Serial emulator interface

- Nonvolatile Program and Data Memories
  - 80k bytes of In-system reprogrammable Flash
    - Endurance: 20,000 cycles (min)
    - Page erase capability: 512 bytes per page
  - 8K bytes static data RAM

- Peripheral Features
  - USB 2.0 Full Speed SIE
    - Host or Device mode operation
    - Supports bulk or isochronous transfer
    - 5 endpoints
  - 4 channels, 10-bit ADC
    - 4 channels
    - Automatic scanning and de-bouncing
    - Scan duty cycle control for power saving application
  - Clock generator
    - Software selectable MCU running frequency
    - Internal 8MHz RC oscillator with calibration features
    - 48 MHz PLL USB clock generator
    - Low jitter audio master clock generator PLL
  - 96kHz 24 bit audio digital audio interface
    - Supports 1 stereo output
    - I2S, Left-justified or Right-justified interface
    - Master or slave mode
  - Real time clock counter with alarm interrupt and 32.768kHz reference clock calibration feature
  - 16-bit watch dog timer
  - Programmable frequency buzzer output
  - Dual programmable UART with 32 bytes transmit and receive FIFO
  - Two 12-bit PWM channels
  - One Master/Slave mode I2C interface
  - Two Master mode I2C interface
  - Dual 16-bit programmable timer/counter
    - 8-bit auto reload
    - Each can be configured as two 8-bit counters
  - One 16-bit programmable timer/counter with 16-bit auto reload and capture feature
  - IR remote signal decoder
    - NEC/Toshiba format
    - Pulse width counter to supports other remote format
  - 35 GPIO pins
  - 1 external interrupt input pin

- Others
  - Power-on reset and Brown-out detection
  - On-chip 2.5V LDO regulator
  - 3.3V supply voltage
  - 48 pins QFN package

7. PIN DESCRIPTION

QFN 48	Name	Type	RS	Descriptions
1	TX0 / P5[3]	IO,S	Z	GPIO pin. UART transmitter output.
2	ADC0 / P10[0]	IO,S	Z	GPIO pin. ADC input.
3	ADC1 / P10[1]	IO,S	Z	GPIO pin. ADC input.
4	ADC2 / P10[2]	IO,S	Z	GPIO pin. ADC input.
5	ADC3 / P10[3]	IO,S	Z	GPIO pin. ADC input.
6	TESTB	I,S	I	Active low test mode enabled input with internal pull-up.
7	AVCC	-	-	3.3V PLL supply voltage.
8	AGND	-	-	PLL analog ground.
9	IRQ / P7[4]	IO,S	Z	Interrupt input. GPIO pin.
10	I2CSCL1 / P9[5]	IO,S	Z	GPIO pin. I2C interface clock.
11	I2CSDA1 / P9[4]	IO,S	Z	GPIO pin. I2C interface serial data.
12	RSTB	I,S	I	Active low reset input.
13	I2CSCL0 / P8[1]	IO,S	Z	GPIO pin. I2C interface clock.
14	I2CSDA0 / P8[0]	IO,S	Z	GPIO pin. I2C interface serial data.
15	XI12M	I	I	12MHz oscillator input
16	XO12M	O	O	12MHz oscillator output
17	GND	-	-	System ground
18	VCC	-	-	3.3V power supply
19	VDD	-	-	On-chip LDO 2.5V output
20	LCDRDX / P0[5]	IO,S	Z	GPIO pin. External LCD module interface read.
21	LCDWRX / P0[6]	IO,S	Z	GPIO pin. External LCD module interface write.
22	LCDA0 / P1[3]	IO,S	Z	GPIO pin. External LCD module interface address.
23	LCDD3 / P1[4]	IO,S	Z	GPIO pin. External LCD module interface data.
24	LCDD2 / P1[5]	IO,S	Z	GPIO pin. External LCD module interface data.
25	LCDD1 / P1[6]	IO,S	Z	GPIO pin. External LCD module interface data.
26	LCDD0 / P1[7]	IO,S	Z	GPIO pin. External LCD module interface data.
27	DP / P8[5]	IO,S	Z	GPIO. USB transceiver D+ pin
28	DM / P8[6]	IO,S	Z	GPIO. USB transceiver D- pin
29	VCC	-	-	3.3V power supply
30	XO32K	O	O	32768Hz oscillator output
31	XI32K	I	I	32768Hz oscillator input
32	PWM0 / P3[5]	IO,S	Z	GPIO. PWM output. LCD segment.
33	PWM1 / P3[6]	IO,S	Z	GPIO. PWM output. LCD segment.
34	I2CSCL3 / P4[0]	IO,S	Z	GPIO. I2C interface clock. LCD segment.
35	I2CSDA3 / P4[1]	IO,S	Z	GPIO. I2C interface clock. LCD segment.
36	BUZ / P4[5]	IO,S	Z	GPIO pin. Buzzer output. LCD segment.
37	RX1 / P5[4]	IO,S	Z	GPIO pin. UART receiver input.
38	TX1 / P5[5]	IO,S	Z	GPIO pin. UART transmitter output.
39	MCLK	IO,S	Z	Digital audio master clock.
40	BCLK / P6[3]	IO,S	Z	GPIO pin. Digital audio serial data clock.
41	LRCLK / P6[4]	IO,S	Z	GPIO pin. Digital audio sampling frequency clock.
42	DAUDO / P6[6]	IO,S	Z	GPIO pin. Digital audio data output.
43	EMU_SCLR / P7[0]	IO,S	Z	GPIO pin. Emulator interface clear.
44	EMU_SCLK / P7[1]	IO,S	PU	GPIO pin. Emulator interface clock. Default with internal pull-up enabled.
45	EMU_SDI / P7[2]	IO,S	Z	GPIO. Emulator interface data input.
46	EMU_SDO / P7[3]	IO,S	Z	GPIO. Emulator interface data output.
47	REMO / P5[1]	IO,S	Z	GPIO pin. Infra red Remote control input.
48	RX0 / P5[2]	IO,S	Z	GPIO pin. UART receiver input.

I	- Input pin	S	- CMOS Schmitt Trigger
O	- Output pin	(P)U	- (Programmable) Pull-up
IO	- Bidirectional pin	(P)D	- (Programmable) Pull-down
IA	- Analog input pin	L	- LCD Pad
OA	- Analog output pin	0,1,Z	- Logic state 0, Logic state 1,High impedance

8. ELECTRICAL SPECIFICATION

8.1. Absolute Maximum Rating

Item	Symbol	Rating	Unit
Power Supply Voltage (VCC)	VCC	-0.5 to 6.0	V
Analog Power Supply Voltage (AVCC)	AVCC	-0.5 to 6.0	V
Core Supply Voltage (VDD)	VDD	-0.5 to 6.0	V
Input Voltage	V_{IN}	-0.5 to VCC+ 0.5	V
Power Dissipation (Ta = 70°C)	Pd	TBD	mW
Storage Temperature	T_{STG}	-20 to 125	°C
Operating Temperature	T_{OPR}	0 to 70	°C

8.2. Recommended Operating Condition

Item	Symbol	Min.	Typ.	Max.	Unit
Power supply voltage (VCC)	VCC	3.0	3.3	3.6	V
Analog Power supply voltage (AVCC)	AVCC	3.0	3.3	3.6	V
Power supply voltage (VDD)	VDD	2.25	2.5	2.75	V
Input voltage	V_{IN}	0	-	VCC	V
Operating temperature	T_{OPR}	0	-	70	°C

8.3. Leakage Current and Capacitance

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
I_{IN}	Input current	No pull-up or pull-down	-10	-	10	µA
I_{OZ}	Tri-state leakage current		-10	-	10	µA
C_{IN}	Input pin capacitance			8		pF
C_{OUT}	Output pin capacitance			8		pF
C_{BID}	Bidirectional pin capacitance			8		pF

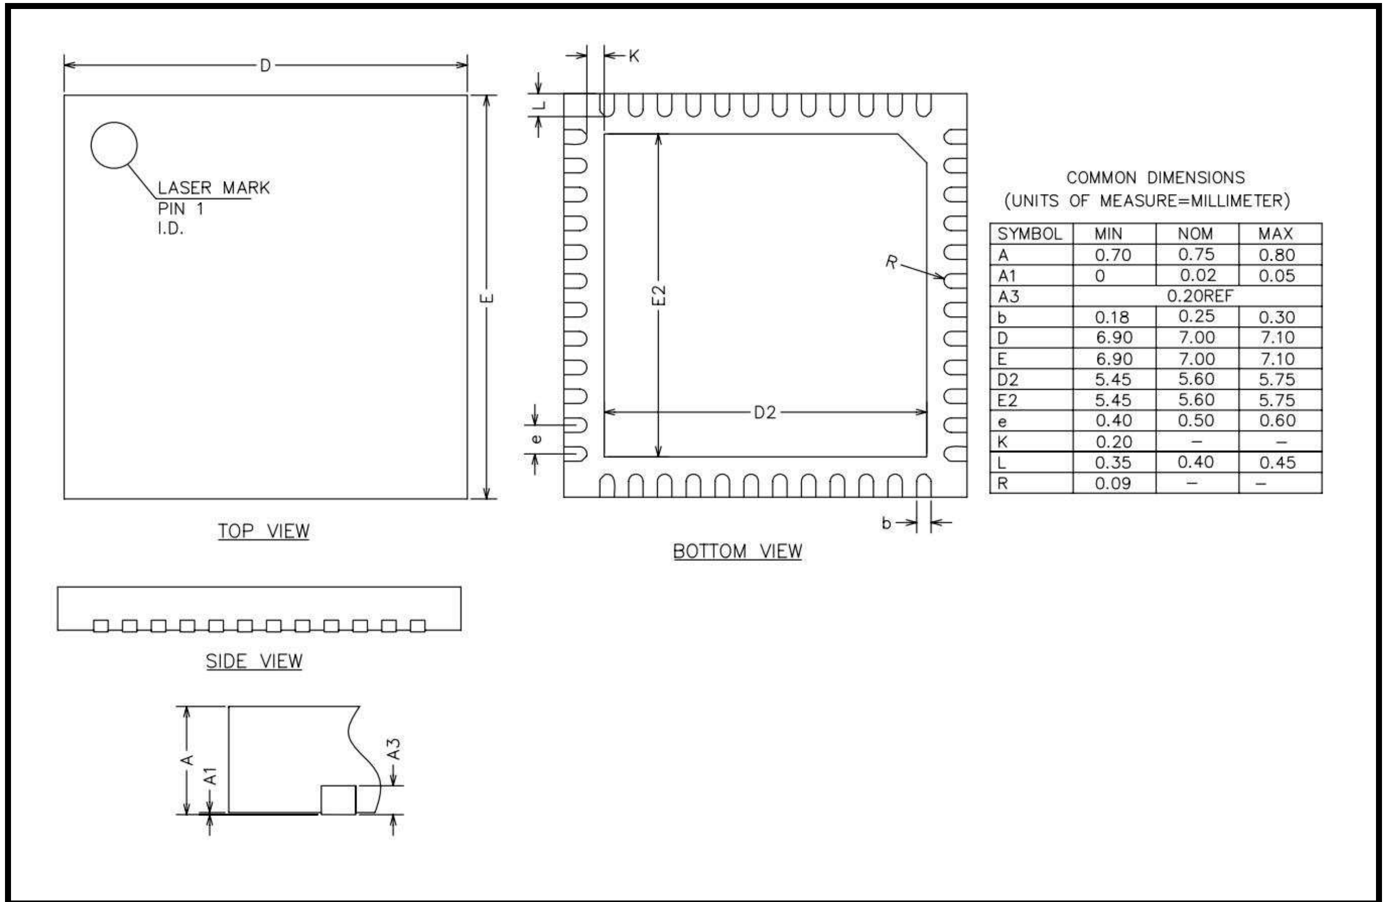
8.4. DC Electrical Characteristics

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
GPIO buffer						
V_{IH1}	Input high voltage (All except MCLK pin)	-	0.6*VCC	-	-	V
V_{IL1}	Input low voltage (All except MCLK pin)	-	-	-	0.4*VCC	V
R_{PU}	Pull-up resistance GPIO and TESTB pins	V_{IN} = 0V	30	50	85	kΩ
I_{OL1}	Output low current (All except MCLK pin)	V_{OL} = 0.4V	3	5		mA
I_{OH1}	Output high current (All except MCLK pin)	V_{OH} = VCC - 0.4V	3	4		mA
I_{OL2}	Output low current (MCLK pin)	V_{OL} = 0.4V	9	11		mA
I_{OH2}	Output high current (MCLK pin)	V_{OH} = VCC - 0.4V	7	9		mA
V_{IH2}	Input high voltage (MCLK pin)	-	0.54*VCC	-	-	V
V_{IL2}	Input low voltage (MCLK pin)	-	-	-	0.46*VCC	V
2.5V LDO						
V_{DD}	Output voltage	Load current = 35mA	2.4	2.5	2.6	V
V_{DROP}	Dropout voltage	Load current = 35mA *Note 1*			170	mV
$\triangle V_{DD}$	Line Regulation	V_{CC}=2.75V to 3.6V			0.3	%
$\triangle V_{DD}$	Load Regulation	Load current = 1mA to 35mA			0.3	mV/mA
10-bit ADC						
V_{IN}	Full scale input span		0		VCC	V
INL	Integral linearity error				±2	LSB
DNL	Differential linearity error				±0.75	LSB
V_{offset}	Input offset error				±2	mV
Current Consumption (sum of current draw at VCC and AVCC)						
Idd_opr	Operating current	*Note 2*	-	25	-	mA
Idd_rtc	Real time clock current	*Note 3*	-	50	80	μA
Idd_stdby	Standby current	*Note 4*	-	30	40	μA

Note:

1. This is simulation data only.
2. No load on all pins, LDO enabled, MCU run at 12MHz, ADC enabled, PLL enabled.
3. No load on all pins, LDO enabled, CPU clock source use RCOSC, RTC running, ADC disabled, PLL disabled, USB suspend, 12MHz oscillator disabled, short flash read pulse enabled, use timer interrupt to wake up CPU.
4. All oscillator disabled, USB suspend, ADC disabled, PLL disabled, USB suspend, all GPIO pins output drive H

9. PACKAGE INFORMATION



SYMBOL	MIN	NOM	MAX
A	0.70	0.75	0.80
A1	0	0.02	0.05
A3	0.20REF		
b	0.18	0.25	0.30
D	6.90	7.00	7.10
E	6.90	7.00	7.10
D2	5.45	5.60	5.75
E2	5.45	5.60	5.75
e	0.40	0.50	0.60
K	0.20	–	–
L	0.35	0.40	0.45
R	0.09	–	–

10. SOLDERING INDICATION

This section gives a very brief insight to a complex technology. There is no soldering method that is ideal for all surface mount IC packages. Wave soldering can still be used for certain surface mount ICs, but it is not suitable for fine pitch SMDs. In these situations reflow soldering is recommended.

1. Reflow Soldering

Reflow soldering requires solder paste (a suspension of fine solder particles, flux and binding agent) to be applied to the printed-circuit board by screen printing, stenciling or pressure-syringe dispensing before package placement.

Several methods exist for reflowing; for example, convection or convection/infrared heating in a conveyor type oven. Throughput times (preheating, soldering and cooling) vary between 100 and 200 seconds depending on heating method.

Typical reflow peak temperatures range from 215 to 250°C. The top-surface temperature of the packages should preferable be kept below 220 °C for thick/large packages, and below 235 °C for small/thin packages.

2. Wave Soldering

Conventional single wave soldering is not recommended for surface mount devices (SMDs) or printed-circuit boards with a high component density, as solder bridging and non-wetting can present major problems.

To overcome these problems the double-wave soldering method was specifically developed.

If wave soldering is used, the following conditions must be observed for optimal results:

- Use a double-wave soldering method comprising a turbulent wave with high upward pressure followed by a smooth laminar wave.
- For packages with leads on two sides and a pitch:
  – larger than or equal to 1.27 mm, the footprint longitudinal axis is **preferred** to be parallel to the transport direction of the printed-circuit board;
  – smaller than 1.27 mm, the footprint longitudinal axis **must** be parallel to the transport direction of the printed-circuit board.

  The footprint must incorporate solder thieves at the downstream end.
- For packages with leads on four sides, the footprint must be placed at a 45 . angle to the transport direction of the printed-circuit board. The footprint must incorporate solder thieves downstream and at the side corners.

During placement and before soldering, the package must be fixed with a droplet of adhesive. The adhesive can be applied by screen printing, pin transfer or syringe dispensing. The package can be soldered after the adhesive is cured.

Typical dwell time is 4 seconds at 250°C.

A mildly-activated flux will eliminate the need for removal of corrosive residues in most applications.

3. Manual Soldering

Fix the component by first soldering two diagonally-opposite end leads. Use a low voltage (24 V or less) soldering iron applied to the flat part of the lead. Contact time must be limited to 10 seconds at up to 300 °C.

When using a dedicated tool, all other leads can be soldered in one operation within 2 to 5 seconds between 270 and 320 °C.

4. Suitability of Surface Mount IC Packages for Wave and Reflow Soldering Methods

Package	Soldering Method	
	Wave	Reflow [1]
BGA, HBGA, LFBGA, SQFP, TFBGA	Not suitable [2]	Suitable
HBCC, HLQFP, HSQFP, HSOP, HTQFP, HTSSOP, HVQFN, SMS	Not suitable	Suitable
PLCC (3), SO, SOJ	Suitable	Suitable
LQFP, QFP, TQFP, QFN	Not recommended [3][4]	Suitable
SSOP, TSSOP, VSO	Not recommended [5]	Suitable

Notes

1. All surface mount (SMD) packages are moisture sensitive. Depending upon the moisture content, the maximum temperature (with respect to time) and body size of the package, there is a risk that internal or external package cracks may occur due to vaporization of the moisture in them (the so called popcorn effect).
2. These packages are not suitable for wave soldering as a solder joint between the printed-circuit board and heatsink (at bottom version) can not be achieved, and as solder may stick to the heatsink (on top version).
3. If wave soldering is considered, the package must be placed at a 45 . angle to the solder wave direction. The package footprint must incorporate solder thieves downstream and at the side corners.
4. Wave soldering is only suitable for LQFP, TQFP and QFP packages with a pitch equal to or larger than 0.8 mm; it is definitely not suitable for packages with a pitch equal to or smaller than 0.65 mm.
5. Wave soldering is only suitable for SSOP and TSSOP packages with a pitch equal to or larger than 0.65 mm; it is definitely not suitable for packages with a pitch equal to or smaller than 0.5 mm.
